

Bidirectional Charging Outdoor Power Supply

Overview

Bidirectional EV chargers have the unique ability to both charge your EV's battery and discharge it to supply power elsewhere. When your car is plugged in, the charger converts AC (alternating current) from the grid or solar panels into DC (direct current) to charge the battery. Market Maturity Accelerates: 2025 marks the transition from experimental trials to commercially viable bidirectional charging solutions, with major automakers like GM, Ford, and Tesla committing to fleet-wide implementation by 2026, making this technology mainstream rather than niche. Tapping into this reservoir of energy with vehicle-to-home (V2H) technology turns your car into a powerhouse that can run your home for days. Why trust EnergySage?
