

# Bidirectional charging of mobile energy storage containers at drilling sites

## Overview

This paper introduces a novel testing environment that integrates unidirectional and bidirectional charging infrastructures into an existing hybrid energy storage system. Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure. Can bidirectional EVs be used as mobile storage?

In contrast to stationary storage and generation which must stay at a selected. Battery Energy Storage Systems (BESS) are systems that use battery technology to store electrical energy for later use. They typically consist of a collection of battery units, associated power electronics, control systems, and safety equipment, which are used to store, manage, and release energy. This is often referred to as Vehicle-2-Grid (V2G) or Vehicle-2-Home (V2H). In her keynote speech, she explained that bidirectional.
