

Copenhagen solar container communication station energy storage construction project

Overview

Danish renewable energy developer Copenhagen Energy has partnered with a local electricity and fibre network distributor Thy-Mors Energi to set up a 100MW PV and battery energy storage system (BESS) project in Ballerum, about 370km from Copenhagen. Copenhagen Energy has been developing the projects since the start of 2024. It will now proceed work with the procurement of long-lead components such as batteries, inverters, and transformers, after which it will choose engineering, procurement and construction (EPC) contractors and key suppliers. On 2 June 2025, CINEA attended the inauguration of the EU funded 'coordinated supply of onshore power in Baltic seaports' project of the Connecting Europe Facility Transport (CEF Transport) programme. With a total storage capacity of 132 MWh, the projects now claim the (unofficial) title as Denmark's largest battery storage project to date. This is a milestone moment for our development team. Battery energy storage systems (BESS) License: CC0 1. Even though obtaining approval to operate a battery system in an airport's critical.
