In particular, they are based on experiences working with States affected by Hurricane Sandy including New Jersey and New York where high winds, coastal flooding, and other hazards of the “superstorm” caused damage which cost the federal government \$50 billion to restore (Hurricane Sandy Rebuilding. This report was developed for and sponsored by the U. Department of Energy's Federal Energy Management Program (FEMP) with Rachel Shepherd as the program manager and lead reviewer. Additional FEMP reviewers include Tracy Niro, Skye Schell, Joanne Lowry, Hayes Jones, Anne Hampson, and Hannah. Below is a table of publicly available microgrid design and economic feasibility tools, in alphabetical order, that were identified with input from SEPA's Microgrid Working Group. Following the table, SEPA included the description and link to each of the tools. It is not a final EPRI technical report. Electric Power. Microgrids, which are localized electrical grids that can disconnect from the traditional grid and operate autonomously using local energy sources, represent a critical defensive tool against widespread power disruptions, yet remain challenging to implement due to regulatory complexity, high. Microgrids have been available for years, performing safely and effectively. Society is becoming increasingly—and.
