

# Fire protection in solar inverter room

## Overview

In this post, we explore the potential fire hazards associated with solar photovoltaic (PV) panels and battery energy storage systems (BESS), and how to integrate them into your fire safety strategy. DC (direct current) faults are the primary cause of fires in Solar PV systems. A DC fault that could. Rather, the primary area of concern for solar farms centers around solar inverter fire risk, and risk mitigation as recent studies indicated solar farm fires are underestimated. Can solar inverter catch fire, then?

What are the potential causes of this risk?

This is a valid issue, considering that inverters run continually in hot.
