

Lithium battery pack multi-channel voltage meter measurement

Overview

The problem with measuring individual cell voltage in a pack of series connected battery is that, the reference point remains the same. The below picture illustrates the same For simplicity let us assume that all four cells are at a voltage level of 4V as shown above. Now if we use a microcontroller like Arduino to measure. We already know an Op-Amp when working as a differential amplifier gives the difference between the two voltage values provided to its inverting. The complete circuit diagram for monitoring Multicell voltage in Lithium Battery Packis given below. The circuit was designed using EasyEDA and we will use the same to fabricate our PCB also. As you can see we have. After completing the design of this Lithium cell Voltage measurement circuit, you can order the PCB through JLCPCB.com. To order the PCB from JLCPCB, you need Gerber File. To download Gerber files of your PCB just click. Now that our circuit is ready, it is time to get it fabricated. Since the Op-Amp I am using is available only in SMD package I had to fabricate a PCB for my circuit. So, like always we have used.
