

# Pack battery introduction

## Overview

A battery pack is a complete energy storage unit made by combining multiple battery cells together with electrical, mechanical, and safety components. Unlike a single battery cell, a battery pack is designed to deliver usable voltage, capacity, power, and safety for real-world. A battery pack is a set of batteries or battery cells arranged in series or parallel to supply power. Battery packs can be primary (non-rechargeable) or secondary (rechargeable) and usually use lithium-ion cells. It's a single unit that typically provides between 3V and 4V. You can't get more. rials Sci. Yet many buyers and even engineers still confuse battery packs, battery cells, and battery modules, or underestimate the importance of proper battery. In modern energy storage systems, batteries are structured into three key components: cells, modules, and packs. This application note is focused on battery module and pack level testing using examples of real-world industry.
