

Papua New Guinea Lead-Carbon Battery Energy Storage Project

Overview

The project encompasses the construction of a solar and battery energy storage system (BESS) minigrid to be built on the island of Buka, within the autonomous region of Bougainville in Papua New Guinea. It will address the electricity needs of the region, which relies. The project, owned and operated by AES Distributed Energy, consists of a 28 MW solar photovoltaic (PV) and a 100 MWh five-hour duration energy storage system. AES designed the unique DC-coupled solution, dubbed “the PV Peaker Plant,” to fully integrate PV and storage as a power plant. The Flexible 2.72kWh, supports 1 & 3-phase HV inverters. Safe LiFePO4 cells with vehicle-grade BMS. Powerful Strong backup, IP65 for indoor/outdoor use. The global solar storage container market is experiencing explosive growth, with demand increasing by over 200% in the past. The PAWA PNG project, a joint venture with Dirio Gas & Power and the PNG government, will provide 283MW of less expensive and more reliable electricity supply with significantly lower emissions, as it primarily replaces aging, inefficient diesel-based generation with modern, high efficiency liquid. The United Nations Office for Projects Services has kicked off a tender for the development and construction of a solar and battery storage minigrid in Papua New Guinea. The deadline for applications is March 24, 2025. Please reach out via contact details.
