

## Photovoltaic brackets are manually stacked and packaged after galvanizing

### Overview

In order to facilitate the acceptance, transportation and on-site installation of the bracket, the bracket should be properly packaged. Auxiliary materials such as bolts and nuts should be packaged separately, and it is strictly forbidden to mix auxiliary materials. When manufacturing photovoltaic brackets, one question consistently sparks debate: Should punching come before galvanizing?

This seemingly simple sequence actually determines long-term durability, installation efficiency, and project costs. Let's break down why this technical detail matters more. To ensure the smooth installation of photovoltaic system brackets and meet design requirements, Guidance Method For The Installation Of PV System Brackets are provided, including ground-mounted, rooftop, adjustable tilt angle, floating, Building-Integrated Photovoltaics (BIPV), bifacial, and. Structural Materials Except Those Indicated in the Drawing (1). Steel structure material: Grade 50 steel shall be used for columns, sloped beams and purlin. The fixed bracket is self-explanatory. Tracking the bracket requires the bracket to be like a sunflower, with the flowers (the front of the solar module) moving along with the sun. Warranty details are available on [www](http://www). All installers must thoroughly read this installation manual and have a clear understanding of the installation. Here's a guide that will help you know everything essential about the PV panel mounting brackets or solar panel brackets- necessities, benefits, types, material components, and probable solar systems, essential few things to consider while choosing the right type, probable steps to install them.
