

Photovoltaic panels fixed on the ground

Overview

A ground-mounted solar system is a photovoltaic (PV) array that is installed directly on the ground, rather than on a roof. But ground-mounted panels also let you dial them into exactly the right direction and angle to maximize sun exposure, which can increase your electric bill savings over time. You can even install tracking systems so your solar panels follow the sun throughout the day. They offer an excellent alternative for homeowners with unsuitable roofs or those wanting maximum energy production. Unlike rooftop systems, which are constrained by. The IronRidge® Ground Mount System combines our XR100® or XR1000® Rails with locally-sourced steel pipes or mechanical tubing, to create a cost-effective structure capable of handling any site or terrain challenge. Installation is simple with only a few structural components and no drilling. While rooftop solar often gets the spotlight, ground-mounted solar systems are gaining popularity for their versatility, efficiency, and ease of maintenance. If you're considering solar for your home, commercial property, or agricultural land, this guide will help you understand what ground-mounted.
