Still, you should be strategic with placement. Some things you need to consider include: There's no difference in the output solar panels produce regarding. When mounting solar panels, choosing between horizontal (side-by-side, wide orientation) and vertical (stacked, tall orientation) placement is a critical decision that impacts energy output, space efficiency, and long-term maintenance. Most homes achieve better results with a horizontal orientation, especially when aiming to capture the most sunlight on the panels. Image credit: Leipzig University of Applied.
