

Photovoltaic panels with flat top and sloping top

Overview

Many homeowners assume solar panels only work on sloped roofs, but that's a common solar myth. Optimal Performance Through Flexibility: Flat roofs offer superior energy production potential compared to sloped roofs because panels can be positioned at the ideal tilt angle (15-40 degrees) and orientation regardless of building direction, often resulting in 10-15% higher energy yields. You can install solar on a flat roof, but you'll need extra mounting. Flat roofs offer unique advantages for solar systems, such as the ability to optimize angles for maximum sunlight exposure – did you know that panels on flat roofs can tilt up to 30 degrees?

This can significantly boost energy production, making it an attractive option for many. We specialize in supplying premium solar PV systems for commercial, industrial and multi tenant condo/apartment. Yes, you can successfully install solar panels on the flat roof of your home or business. However, there are some challenges to be aware of. Flat roofs have a minimal slope allowance that will accommodate solar PV panel systems.
