

Solar power generation installed on Swiss containers

Overview

A Swiss start-up has created a containerized movable PV system that is designed to be easily relocated to allow the use of solar energy in locations where a fixed installation is not an option. The solution is based on a racking technology which can include two racks able to host up to 30 solar. We make mobile solar containers easy to transport, install and use. Keystone / Jean-Christophe Bott A Swiss start-up's system to quickly install and remove solar panels between train tracks is now being tested. LZY mobile solar systems integrate foldable, high-efficiency panels into standard shipping containers to generate electricity through rapid deployment generating 20-200 kWp solar. Our products are engineered and manufactured in the UK, ready to generate and provide electrical power at the client's premises anywhere in the world. The Off Grid Container also.
