Solar power generation technology research and development

Overview

This paper highlights solar energy applications and their role in sustainable development and considers renewable energy's overall employment potential. The Photovoltaics (PV) team supports research and development projects that lower manufacturing costs, increase efficiency and performance, and improve reliability of PV technologies, in order to support the widespread deployment of electricity produced directly from sunlight (“photovoltaics”). Therefore, the massive amount of solar energy attainable daily makes it a. NLR's solar energy research includes next-generation solar technologies for national security applications and emerging industries as well as photovoltaic performance, reliability, and systems integration. The Solar Futures Study, initiated by the U. Department of Energy (DOE) Solar Energy Technologies Office and led by the National Renewable Energy Laboratory (NREL), envisions how, over the next few decades, solar could come to power 40% or more of U. electricity demand, dramatically.
