

# The solar and energy storage industries started late

## Overview

In the late 1700s and early 1800s, researchers discovered how to use sunlight to power ovens during long sea voyages and even produced solar-powered steamboats. When it comes to more modern applications of solar energy, though, things started to develop around the 19th. Since the creation of the first silicon solar cell 70 years ago, solar leaders have been innovating, improving efficiency, lowering costs, and growing this American-born technology into an essential part of our nation's energy system. The Bell Solar Battery The history of solar energy is an. We started out concentrating the sun's heat with glass and mirrors to light fires. Here you can learn more about the milestones in the historical development of solar technology, century by century, and year by year. With the way the cost of solar has plummeted in the past decade, it's easy to forget that going solar. Long before the first Earth Day was celebrated on April 22, 1970, generating awareness about the environment and support for environmental protection, scientists were making the first discoveries in solar energy. Proposed new fire code language released in September 2024; likely June 2025 time frame for ahead in late 2024 after a 2-year delay. Current NJ BPU proposal is to launch.
