

# Underground photovoltaic panels

## Overview

Not all roofs are great for solar. Whether yours is too sloped, only has space on the north side, or isn't the right material, you might not be able to get rooftop solar. If you have large, sun-drenched yard, a ground-mounted solar panel system could be a great alternative. But maximizing its performance depends on several. This page covers the layout and digging of the trench for the underground wiring from the meter/distribution panel location on the house to PV panel array out in the yard. The PV system we decided on uses Enphase micro-inverters mounted at each PV panel to convert the DC generated by the PV panel. Our ground mount solar power kits can be installed yourself or by a licensed contractor. Choose our permit service to have detailed engineering plans and permit documents drawn up for you. Do you have a shed or other outbuilding that could use some lighting?

Are you sick of stubbing your toe on the lawn mower and knocking over shovels and rakes every time you walk into your shed?

It's time to.
