One of three key components of that initiative involves codes, standards, and regulations impacting the timely deployment of safe energy storage systems (ESS). The timely deployment of safe ESS is affected by the ability of relevant parties to document and validate that a proposed ESS installation. While installed capacity grows rapidly, equipment failures increasingly threaten ROI—over 57% of energy storage plants reported unplanned outages in 2023, with 80% stemming from equipment defects, system anomalies, or poor integration. SED convened a working group consisting of California's major utilities, energy storage developers, codes and standards experts, and industry associations to advise and contribute to the development of a checklist for SED inspectors to use. Below is the inspection checklist developed by this.
