

# Why not wind and solar power

## Overview

Those options seem pretty good because wind and sunshine are free and abundant, and the equipment needed to capture their energy is becoming astonishingly cheap. But, unfortunately, wind and solar have a problem—intermittency. There are two types of energy sources: renewable and nonrenewable. Fossil fuels (such as coal, oil, and natural gas) are finite, nonrenewable natural resources, formed over millions of years from the remains of ancient plants and microorganisms that are subjected to enormous heat and pressure deep. Although hydro or geothermal power make for great carbon-free renewable power where they exist, for most of the country wind and solar power are the only real options for renewable energy at scale. It is extremely expensive but is made to look cheap by hiding an 80% subsidy. Industry lobbyists and sinister environmental organizations, like the Sierra. Solar installations achieve 5.6 gigawatts capacity growth in early 2023, while wind turbines generate enough electricity to power 9% of American homes. But which is better?

We will compare the two energy generation. My new Brookings working paper breaks down the comprehensive costs and benefits of five common low-carbon electricity technologies: wind, solar, hydroelectric, nuclear, and gas combined cycle (an advanced, highly energy efficient type of natural gas plant). "The Bluestone Wind Farm in Windsor, N. (AP) Wind energy infrastructure doesn't produce power if the air isn't moving, and solar doesn't generate power if.

## Article Content

Renewable energy is cheaper and healthier – so why ...

Solar and wind power aren't just better for the climate; they're also less expensive today than fossil fuels at utility scale, and they're less harmful to ...

Why Wind Power Is Useless

Renewable electricity, mostly wind power, is useless in every dimension. It is extremely expensive but is made to look cheap by hiding an ...

Why the Best Path to a Low-Carbon Future is Not Wind ...

My new Brookings working paper breaks down the comprehensive costs and benefits of five common low-carbon electricity technologies: wind, ...

Wind, solar power aren't worthless if there's no wind or sun

Wind energy infrastructure doesn't produce power if the air isn't moving, and solar doesn't generate power if the sun's not out. But that doesn't mean that either source of energy is...

The Myth of Wind and Solar Energy: They Are Not Free

But even that statement is a bit misleading, for intermittent technologies like wind and solar cannot be relied upon to produce power when needed, and must have other technologies to ...

Wind and solar are getting harder to build, despite need, profit

Unsubsidized wind and solar power have been the cheapest forms of newly-built energy for the past decade, according to the global financial services firm Lazard.

Wind Power | Pros, Cons, Debate, Arguments, ...

As Forbes journalist Christopher Helman reports, “Wind power has a carbon footprint 99% less than coal-fired power plants, 98% less than natural ...

Why Wind and Solar Aren't Enough

So whereas we'd like to believe that building wind and solar farms will allow us to close dirty power plants, it's not so. Those old fossil-fueled plants ...

Electricity Generated from Wind and Solar Cannot ...

Wind and solar are inherently intermittent and weather-dependent, and they lack the consistency needed to power a complex, industrialized world ...

Solar Energy vs Wind Energy: Cost, Efficiency, ...

Renewable energy technologies like solar and wind power are transforming how we generate electricity. These clean energy sources offer ...
